

Abstract

5 A description is given of a microcapsule formulation comprising
microcapsules having a core of a hydrophobic material and a
capsule shell of an addition polymer containing in copolymerized
form at least 1% by weight of cationogenic monomers and/or
polyethylenically unsaturated monomers whose unsaturated sites
10 are connected via successive chemical bonds of which at least one
bond is acid-hydrolyzable. A description is further given of a
microcapsule formulation comprising microcapsules having a core
of a hydrophobic material, which comprises at least one fragrance
or perfume, and a shell of an addition polymer containing in
15 copolymerized form at least 1% by weight of anionogenic
monoethylenically unsaturated monomers and/or polyethylenically
unsaturated monomers whose unsaturated sites are connected via
successive chemical bonds of which at least one bond is
base-hydrolyzable. The microcapsule formulations are employed in
20 laundry detergents or cleaning products.
